# What's a neural network and how does it work?

Simply put

# Convolutional neural networks for classification of N-dimensional data

# What does a convolution block contains?

Convolutional layer

1 <i>x1</i>	1 <i>x0</i>	1	0
1 <i>x0</i>	1 <i>x1</i>	1	0
0	0	1	1
0	0	1	0

Parameterized Filter

2	1
0	1

Convolved features

Pooling Layer

1	1	1	0
1	1	1	0
0	0	1	1
0	0	1	0

Pooled features

Max Pooling Filter

Non linearity Layer

1	1	1	0
1	-1	1	0
0	0	1	1
0	-5	1	0

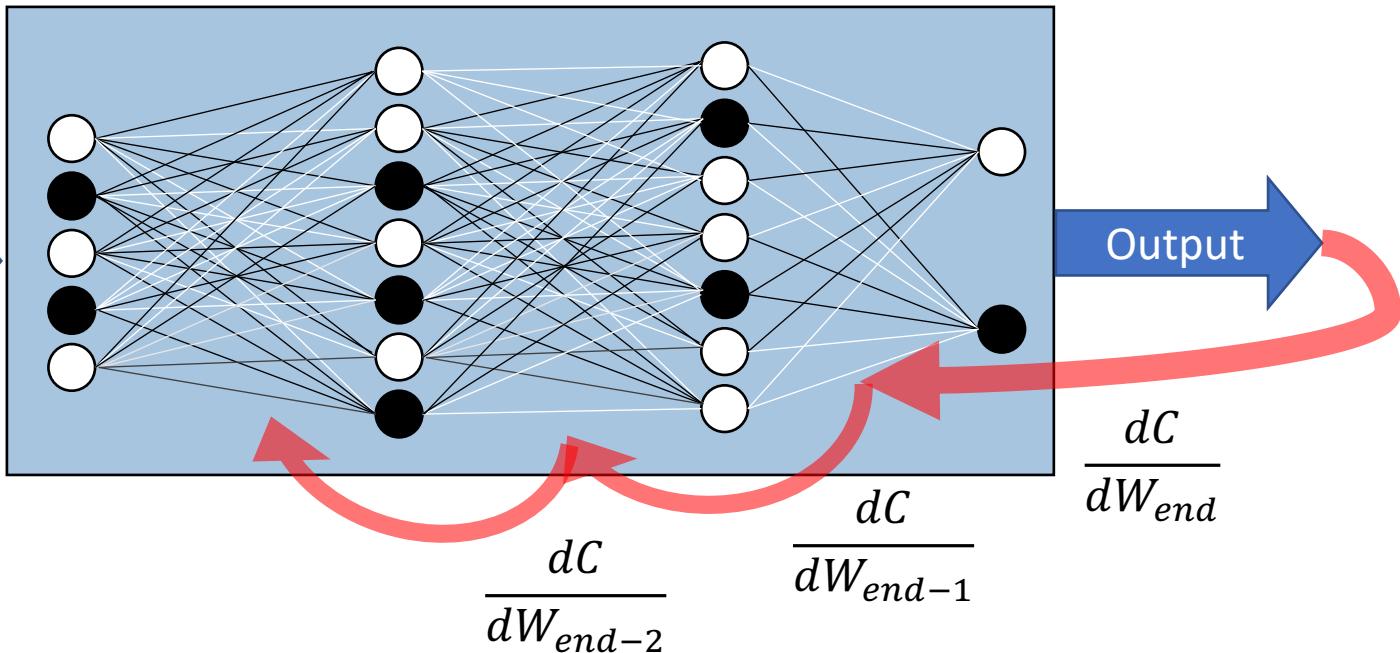

1	1	1	0
1	0	1	0
0	0	1	1
0	0	1	0

# Training a neural network

Input →

Inspired by the animal learning methods

Train the network by minimizing:

$$Cost = \begin{cases} -\log(output) & \text{if target} = 1 \\ -\log(1 - output) & \text{if target} = 0 \end{cases}$$

Backpropagate the error  $\frac{dC}{dW_i}$  to update the parameters using stochastic gradient descent
